

### **Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

### **Listing of Claims:**

1. (Currently Amended) A printing and display device comprising:
  - a flat panel display for displaying images from a computer;
  - a printer including a printhead for printing onto the paper;
  - a paper feed mechanism for feeding the paper to the printhead; and
  - a curved paper guide disposed, when the device is in use, beneath the flat panel display, such that the paper that has been printed is urged horizontally as it exits the device, wherein
    - the paper feed mechanism, the printhead, and an exit into the curved paper guide define ~~a substantially planar~~ an effectively planar paper feed path through the printer from the paper feed mechanism through to the exit, and
    - paper is fed through the planar partially by the force of gravity.
2. (Original) A printing and display device as claimed in claim 1 wherein a viewable size of the printing and display device exceeds 40cm measured along a diagonal of the printing and display device.
3. (Original) A printing and display device as claimed in claim 1, wherein the printer includes at least two the printheads, the printheads being disposed on either side of a path through which print media is fed for printing, thereby enabling substantially simultaneous printing of both sides of the print media.
4. (Original) A printing and display device as claimed in claim 1, configured to receive print data to be printed, and display data to be displayed, from a computer system.
5. (Original) A printing and display device as claimed in claim 3, wherein the printing and display device includes a connection configured to allow releasable operative connection of the computer system to the printing and display device, for receiving the print data and the display data from the computer system.

6. (Original) A printing a display device as claimed in claim 4, wherein the connection includes at least one socket for accepting at least one corresponding data cable.
7. (Original) A printing and display device as claimed in claim 4, wherein the connection includes a wireless receiver for receiving the print data and/or the display data.
8. (Original) A printing and display device as claimed in claim 4, wherein the connection is a Universal Synchronous Bus (USB) connection.
9. (Cancelled)
10. (Previously Presented) A printing and display device as claimed in claim 1, wherein the paper feed mechanism is configured to position the paper substantially parallel to a plane defined by the flat panel display.
11. (Previously Presented) A printing and display device as claimed in claim 1, wherein the paper feed mechanism is configured to accept a single sheet of paper at a time for printing.
12. (Previously Presented) A printing and display device as claimed in claim 1, wherein the paper feed mechanism includes a paper separator for feeding a single sheet of paper to the printhead from a stack of sheets of paper.
13. (Original) A printing and display device as claimed in claim 1, wherein the printer is a process color printer.
14. (Original) A printing and display device as claimed in claim 1, wherein the printer is an inkjet printer.
15. (Original) A printing and display device as claimed in claim 13, wherein the printer has more than 5,000 inkjet nozzles.
16. (Original) A printing and display device as claimed in claim 1 or 14, wherein the printer is a page-width printer.

17. (Cancelled)

18. (Original) A printing and display device as claimed in claim 1, configured to enable printing of standard A4 or Letter sized sheets of paper.

19. (Original) A printing and display device as claimed in claim 1, configured such that paper to be printed is fed manually into a paper path that directs the paper from a region adjacent the upper edge of the flat panel display, past the printhead for printing, then out of the device adjacent a lower edge of the flat panel display.

20. (Cancelled)

21. (Original) A printing and display device as claimed in claim 1, wherein the flat panel display is of one of the following types:

- a. Liquid Crystal Display (LCD);
- b. Organic Light Emitting Diode (OLED)
- c. Field Emission Display (FED)
- d. Plasma Display Panel (PDP)

22. (Original) A printing and display device as claimed in claim 1, wherein the printhead is configured to receive halftoned print data to be printed onto the print media.

23. (Original) A printing and display device as claimed in claim 1, further including a halftoning unit for generating halftoned image data and supplying it to the printhead for printing.

24. (Original) A printing and display device as claimed in claim 1, wherein the printhead is configured to print photographic images.

25. (Original) A printing and display device as claimed in claim 1, wherein the printhead is configured to print image and text data.

26. (Original) A printing and display device as claimed in claim 3, wherein the computer system is a personal computer.

27. (Previously Presented) A printing and display device as claimed in claim 1 further comprising: a stand for holding the flat panel display in an operative position, wherein the stand includes at least one receptacle configured to accept at least one replaceable ink cartridge for supplying ink to the printer.

28. (Previously Presented) A printing and display device as claimed in claim 1 further comprising: a data connection for receiving print data from a computer;; and a data connection hub configured to allow connection of at least one data-receiving device to the printing and display device, enabling the data-receiving device to receive data from the computer.

29. (Original) A printing and display device as claimed in claim 1 wherein the device is configured such that, during printing, the paper being printed passes between the flat panel display and the printhead, or passes behind the flat panel display and the printhead relative to a viewing position of the flat panel display.

30. (Original) A printing and display device as claimed in claim 1 wherein the sheet feeding mechanism is a multi-sheet paper holder; and the printing and display device further comprises a paper sheet separator configured to separate a single paper sheet from the paper in the paper holder for supply to the printhead.

31. (Cancelled)

32. (Original) A printing and display device as claimed in claim 1 being configured to receive documents to be printed from a computer system, the printing and display device including an interface, and being configured to:

- receive, via the interface, input from a user indicative of a print command;
- send, from the printing and display device to the computer system, a print request;
- receive, from the computer system and in response to the print request, a document to be printed; and
- print the document.

33. (Previously Presented) The printing and display device as claimed in claim 1, wherein the substantially planar path is parallel to a plane defined by the flat panel display.

34. (Currently Amended) A printing and display device comprising:

a flat panel display for displaying images from a computer;

a printer including a printhead for printing onto the paper;

a paper feed mechanism for feeding the paper to the printhead;

a paper exit slot from which paper is fed out of the device, the paper exit slot provided at a lower edge of the flat panel display; and

a curved paper guide disposed adjacent the paper exit slot and at the lower edge of the flat panel display, the curved paper guide for urging paper exiting from the exit slot such that the paper exits the device from the lower edge of the flat panel display towards a display side of the flat panel display, wherein

the paper feed mechanism, the printhead, and the exit slot define ~~a substantially an~~ effectively planar paper feed path through the printer from the paper feed mechanism through to the exit, and

paper is fed out of the exit slot with assistance from the force of gravity.
